

## **Important details about the procedures of oil and gas refineries in the world**

The refinery's procedures, my colleagues and dear ones are frank and straightforward and do not need simplification.

In the management of significant factories and refineries, this is called a secure financial, banking, and field system. It cannot be modified because it falls within a matrix and a documentary department approved by the economic and banking administration, the production and export administration, and security and safety. I think if you read the writing at the end of the offers in red, as well as the document on the steps of the first shipment, you will know how work is done with the refinery or any petrochemical factory that has production and specialized products that manages billions of dollars and manages and works to prepare the required quotas according to the reality of sales, first from the regular agents as well as the commercial contractors dealing. With fixed shares with international and governmental institutions, as well as those who have franchises and also have fixed shares of all derivatives, they are obligated to liquidate them in full annually unless they are charged to them, and also from them we, as official delegates registered with them, are required to work according to that.

This is why most oil derivatives traders who search in ways that are inconsistent with the terms and procedures of the refinery do not exceed the volume of their dealings, which can be between 20,000 tons and 50,000 if they are lucky.

Most of them may also be from commercial brokerage companies or those who claim to be officially authorized to purchase for foreign purchasing companies, as they claim, and from fraudsters. Funded and supported by unknown parties with great external authority and influence, their goal is to float the derivatives market and not abide by agreements or deceive the intermediaries and the primary mandate of the refinery. Some want to attack Russian products and refineries and the countries of the Union, as well as Kazakhstan, Uzbekistan, and Azerbaijan in the international market (the Cold War in the energy field). So that they can only seize and control the tank stations. None of the foreign or local investors can deliver any shipments except by agreement with them, and because they also know that refineries in all producing countries have tanks in their name for their products. They cannot control or remove them from the tank stations because an international agreement requires each storage station to be the first owner of the tanks. They are the refineries and the only ones with annual quotas to support the stations.

This is why the TSR has its tanks ready, and they do not care about the hassle of daily, weekly, and monthly rents. Likewise, customs and taxes do not hinder them because they are major international investors and have exemptions. And facilities that are not available to others.

I hope that you have received a general understanding of how refineries work their procedures and why they are emphasized.

I did not want to touch on this, but out of concern for you not to be deceived by any of the so-called traders who buy and sell oil derivatives, most of whom are registered on the blacklist with the refinery authorities, in particular in the countries of Kazakhstan, Azerbaijan, Turkmenistan, and the Uzbeks, because they deliberately commit major violations in their contracts and so on. In their illegal jumps, they bypassed the intermediaries and the official mandate at the refinery. What is most surprising is that the refinery gives the commission, whether it is a small commission or something familiar. Still, the desire for greed, access, selfishness, and disrupting livelihoods has always been their way to reach their goal.

All those who deal with us through our email addresses and our website send purchase orders in the name of our refinery, and under it is the name of my organization, Yemen Hawk for Oil and Gas Services, as an official and registered address with the refinery. We have sent them the address in force with us to participate under the name of the refinery so that we do due diligence DD and approval is given.

The initial agreement is from us. Then, upon the approval of the refinery, after doing due diligence and issuing the order for the refinery to contract with the shipping company or the invoice from the refinery, this means approval to proceed with the buyer, and here, the dealings with the refinery will proceed directly with full transparency.

Our first and last mission is to arrange the documentary procedures and due diligence in the first stage. After approval, the refinery will have to move forward. This is also after the refinery investigates and conducts due diligence more extensively on the buyer's side, and then the link will be direct with the refinery. Upon approval, the buyer will be notified by mail.

The official and CC of Yemen Hawk Oil and Gas Services Corporation, all the Buyer's Required are below:-

1. Buyer LOI.
2. Seller SCO/FCO.
3. Buyer after accepting the Seller's Mandate (YEMEN HAWK CORPORATION FOR OIL AND GAS SERVICES).
4. The buyer must approve the prices and our seller's procedures by Signing, sealing, and reverting them back to us.
5. Buyer must issue PURCHASING COMMITMENT LATER.
6. OFFER ACCEPTANCE and Send it to us with:- 
7. KYC / CIS.
8. TSA / TSR / Q88 WITH CPA.
9. BCL / POF.
10. ICPO.
11. BUYER REGISTRATIONS.
12. IMPORT LICENSES.
13. COMPANY PROFILE.
14. BUYER PASSPORT
15. BUYER's BANK REFERENCES.
16. BUYER's BANK ACCOUNT CAPABILITY AT LIST FOR TO SHIPMENTS.

Do not respond to anyone asking about SGS or anything opposing or against the Refineries' terms and procedures. This is a safety, production, and banking transactions system.

As long as the Logistic Company wasn't fake and had a reputable existence on the ground, and he got confirmation about the availability of the required product, he could move on to getting permits and doing the extension Tanks for at least 2-3 days during his team's Dip-Test and this legal request because the Dip-Test Q&Q duration for 50,000MT takes mostly 36 hours and maybe more.

We are in YEMEN HAWK CORPORATION FOR OIL AND GAS SERVICES COORDINATOR AND FACILITATOR CORPORATION FOR RESELLING PETROLEUM PRODUCTS WE ARE AUTHORIZATION MANDATE OF:

- CORVAL REFINERY Mandate ID: KZ/CE/RN894570.
- ATSKO REFINERY Mandate ID Code No: KZ/EURASIA/RN090654.

Our Seller Corval Refinery and ATSKO REFINERY Trading with legal responsibility under penalty of perjury hereby confirm the Availability and Capability to Supply the underlit products for Immediate Spot and Contract sales. The Supply is guaranteed to meet the Specification and pass through the stringent requirement.

Wish you all the best and success.
